## Introduction

The Quality Assurance Test (QAT) document provides a detailed approach as to how testing will be conducted in support of a specific system change.

The QA testing is completed to determine whether the solution built is doing the right things and should be written from the perspective of the change coordinator.

This QA plan is used in conjunction with the UAT plan to create a full test plan.

- The QA plan is run as round 1.
- The UAT plan is run as round 2.
- While you are creating this plan, consider that you will also require the UAT plan as part of the QA test cycle.
- The QA plan should contain tests for behind the scenes items such as:
  - Are tables being populated with correct values as seen from the back end? The UAT plan will address proper values as seen through the application.
  - Are log files being correctly updated?

## Test Environment

Environment where development and initial QA testing is performed:

<b>DEV Preview Stage:</b>	<a href="http://wwwdevvcm01.opentext.net/sites/campaigns/default/en_US/enterprise-world-2015/program/training">http://wwwdevvcm01.opentext.net/sites/campaigns/default/en_US/enterprise-world-2015/program/training</a>
---------------------------	---

Environment where the Quality Assurance Testing and User Acceptance Testing is performed:

<b>QA Delivery Stage:</b>	<a href="http://wwwqa.opentext.com/campaigns/enterprise-world-2015/program/sessions">http://wwwqa.opentext.com/campaigns/enterprise-world-2015/program/sessions</a>
---------------------------	---

## Pass or Fail Criteria

CATEGORY	CAUSE	ACTION
<b>Pass</b>	No major problems identified (see below for examples of major problems). Minor problems detected. Examples of minor problems are: <ul style="list-style-type: none"> <li>• Cosmetic discrepancies such as font or color differences.</li> <li>• Misspelled field name.</li> </ul>	Fix (or plan to fix minor problems), notify change coordinator of acceptance and signoff.
<b>Fail</b>	Any one of the following: <ul style="list-style-type: none"> <li>• Import/Installation problems (some typical examples):</li> <li>• Insufficient or incorrect installation procedure.</li> <li>• Incomplete export/import.</li> <li>• Occurrences of unexpected errors or "infinite loops".</li> <li>• Abnormal program exits.</li> <li>• Illogical GUIs.</li> <li>• Incorrect labeling of fields.</li> <li>• Does not produce expected result(s), event or sequence of events as outlined in the test plan.</li> <li>• Incorrect calculations.</li> <li>• Incorrect data displayed.</li> <li>• Non-functioning icons, menu items or links.</li> <li>• Combination of several problems with user</li> </ul>	Fix (or plan to fix) problems, review with change coordinator then resubmit files for acceptance testing.

# Test Requirements

This project is tracked in JIRA under Fix Version [MA1802 – EW2015 Agenda Builder](#).

The IT technical team completes initial testing to assess the functionality of middleware calls and data used by the agenda builder—including registration testing—as well as authoring and content creation in WEM, cross-browser support, and data export for reporting. These tests are not all documented for QAT as they are behind the scenes functionality approved by the developers.

<http://middleware20qa.opentext.com/eventsessions.xml?eventid=NGNRX8VN327>

The tester will first use the agenda builder as a **visitor** to the site—this is a user not logged in to OT Connect.

Next, the tester will log in using her OT Connect domain credentials and continue the test as an **authenticated user** of the Enterprise World site but not registered for the conference in Cvent.

After using the agenda builder as a visitor and OT Connect user, the tester will log in using a set of test credentials for a user who **registered** for the conference then returns to the Enterprise World site to view her agenda.

Testers will check the reporting functionality to ensure reports include the required fields and formats.

Additional testing requirements include checking the site on mobile devices and across supported browsers.

**You must be on VPN or in an OpenText office on the network to access the QA environment.**

## How to Report Issues

For any steps that **fail**, please report the problem immediately.

1. [Open a new issue in JIRA](#)
  - Project: **IT Web Applications**
  - Fix Version: **MA1802 – EW2015 Agenda Builder**.
2. Provide a description of the issue, the page where it occurs (URL), and how to reproduce it.
3. Include screen shots if possible.

Please provide the issue number in the PASS/FAIL column for the step that failed, e.g. ITAPPS-2222.
